PROFESSIONAL SUMMARY

DevOps Engineer who turns manual, error-prone deployments into automated, repeatable pipelines — using Terraform, Jenkins, Docker, and Ansible to provision infrastructure and ship code with zero manual server access.

Built and monitored multi-instance AWS environments end-to-end, from Infrastructure-as-Code provisioning through CI/CD automation to Prometheus/Grafana observability.

Brings a rare dual edge: production-grade DevOps automation skills paired with hands-on Python and ML deployment experience, built for teams that need infrastructure and applications to move together.

CORE COMPETENCIES

CI/CD Pipeline Automation | Infrastructure as Code (IaC) | Cloud Infrastructure (AWS) | Containerization (Docker) | Container Orchestration (Kubernetes) | Configuration Management (Ansible) | Continuous Integration / Continuous Deployment | Monitoring & Observability | Linux System Administration | Version Control (Git/GitHub) | Python Scripting | Agile Software Development Lifecycle

PROFESSIONAL EXPERIENCE

DevOps Intern | Star-Agile (Remote)

09/2024 - 03/2025

- Eliminated manual cloud provisioning by engineering Terraform-based Infrastructure as Code across two production-style projects, turning multi-step console setup into a single repeatable command and cutting environment-rebuild time from hours to minutes.
- Architected end-to-end Jenkins CI/CD pipelines that automated build, containerization, and Docker Hub delivery, removing manual build-and-release handoffs and enabling consistent, repeatable software releases.
- Automated zero-touch deployments by integrating Ansible playbooks directly into Jenkins pipelines with SSH-key authentication, eliminating manual server access and reducing deployment steps from a multi-stage manual process to one trigger.
- Delivered real-time infrastructure visibility by deploying a Prometheus and Grafana monitoring stack, replacing reactive manual log-checking with proactive, dashboard-driven health tracking.
- Strengthened cross-environment reliability by performing Linux system administration (package management, service configuration, access control) in support of CI/CD tooling — a transferable skill set applicable to any cloud or on-prem infrastructure.

AI/ML Engineer Intern | KD Infovision

11/2025 - 07/2026

- Cut manual reporting effort by engineering a Python-based migration pipeline that moved dashboards and datasets from Tableau to Domo, closing recurring data-integrity gaps in the process — directly transferable to automating any cross-platform data or config migration.
- Streamlined recurring analytics workflows by automating data preparation and transformation in Alteryx, reducing manual data-cleaning hours and standardizing a previously ad-hoc process.
- Applied containerized, reproducible-deployment practices from DevOps work to ship a machine learning image-classification model, demonstrating the same infrastructure discipline across both application and ML deployment contexts.
- Replaced manual data collection with a scheduled, automated pipeline by building Python web-scraping tools integrated with Groq AI — reinforcing a consistent theme of automating repetitive work end-to-end.

PROJECTS

FinanceMe - Banking and Finance Domain CI/CD Pipeline (Star-Agile Certification Project)

- Provisioned a multi-instance AWS EC2 environment using Infrastructure as Code (IaC) with Terraform (authentication.tf, ec2.tf), replacing manual instance setup with a single automated terraform apply command.
- Built a Jenkins CI/CD pipeline that builds a Docker container image from source and pushes it to Docker Hub on every run, automating the software build-and-release process.
- Implemented configuration management and automated deployment using an Ansible playbook triggered directly from the Jenkins pipeline, using host-group configuration for zero-touch deployment.

- Deployed a dedicated monitoring EC2 instance running Prometheus and Grafana, integrating Prometheus metrics targets into Grafana dashboards for real-time container and infrastructure monitoring.

InsureMe - Insurance Domain CI/CD Pipeline (Star-Agile Certification Project)

- Configured a multi-instance AWS EC2 environment (Jenkins master and deployment target) with Docker installed and integrated into the Jenkins CI/CD pipeline via Docker group permissions.
- Built a Jenkins pipeline to automate source code cloning, application build, and Docker containerization, ensuring consistent, repeatable deployments across environments.
- Implemented Ansible-based configuration management with host groups and SSH-key authentication to automate application deployment to a test server, eliminating manual SSH-based deployment steps.

Medicure - Healthcare Microservices DevOps Pipeline

- Built and deployed a Spring Boot microservices application with REST APIs for doctor registration, search, update, and deletion, containerized with Docker for consistent multi-environment deployment.
- Designed a Jenkins CI/CD pipeline automating build, test, and Kubernetes deployment, streamlining the release process into a single automated trigger.
- Provisioned infrastructure using Infrastructure as Code (IaC) with Terraform, making environment rebuilds reproducible and reducing manual reconfiguration.
- Deployed Prometheus and Grafana for Kubernetes cluster and application monitoring, providing real-time visibility into service health and performance metrics.

Sky Object Detection - YOLOv8 MLOps Pipeline

- Trained a custom YOLOv8 computer vision model on a self-curated dataset to detect and classify birds and aircraft in sky imagery.
- Built an end-to-end MLOps pipeline covering data collection, annotation, model training, validation, and automated inference.
- Containerized and deployed the inference service on AWS EC2 using Docker, exposing REST APIs for real-time image inference.
- Applied DevOps automation practices including dependency management and reproducible builds to ensure consistent deployment across environments.

TECHNICAL SKILLS

- Cloud Platforms: AWS (EC2, S3, IAM, VPC, Route 53, CloudWatch, EKS)
- CI/CD Tools: Jenkins, CI/CD Pipeline Design, Continuous Integration, Continuous Deployment
- Containerization & Orchestration: Docker, Docker Compose, Docker Hub, Kubernetes
- Configuration Management: Ansible
- Infrastructure as Code (IaC): Terraform
- Monitoring & Observability: Prometheus, Grafana, CloudWatch
- Version Control: Git, GitHub
- Operating Systems: Linux, Ubuntu, Windows
- Scripting & Programming: Python
- Databases: MySQL, MongoDB, DynamoDB

CERTIFICATIONS

- DevOps Engineer - Star-Agile
- Scalable Web Applications on Kubernetes
- DevOps Fundamentals - Star-Agile
- Docker Essentials: A Developer Introduction
